

# USB Box Development Book

## Index

1.	Initialize the device.....	3
2.	Release the device.....	4
3.	Device model .....	4
4.	Recording trigger.....	4
5.	Recording file format.....	4
6.	Voice return (callback mode) .....	4
7.	Event return (callback mode).....	4
8.	Message reception (message mode).....	5
9.	Get line voltage.....	5
10.	Get line ringtone number.....	5
11.	Get the current recording duration.....	5
12.	Get Caller ID .....	5
13.	Get DTMF dialing .....	5
14.	Clear Caller ID .....	5
15.	Clear DTMF number .....	5
16.	Get the line status .....	6
17.	Hook off.....	6
18.	Hook on.....	6
19.	Enable microphone (earphone version).....	6
20.	Disable microphone (earphone version).....	6
21.	Dialing .....	7
22.	Auto dial (No need to call other API).....	7
23.	Start playing audio file .....	7
24.	Stop playing audio file.....	7
25.	Start recording .....	7
26.	Stop recording.....	7
27.	Setup the recording folder.....	7
28.	Get recording file path .....	8
29.	Clear recording file path .....	8

30. Get the number of device connections .....	8
31. Get number of device channel .....	8
32. Get device serial No.....	8
33. Get device version.....	8
34. Get SDK version.....	8
35. Audio format conversion.....	9
36. Hook off voltage.....	9
37. Line status detection.....	9
38. Instant recording on off-hook.....	9
39. Recording delay after dialing completed.....	9
40. Voice trigger recording .....	9
41. PBX access code (The preliminary digits that a user must dial to get the outgoing trunk).....	10
42. Line playing volume .....	10
43. Line recording volume .....	10
44. Line AGC .....	10
45. Stop receiving DTMF key press time .....	10
46. Missed Call settings .....	10
47. Pickup waiting time for PC dialing .....	11
48. DTMF waiting time .....	11
49. Enable network dial-up (TCP) function .....	11
50. Disable network dial-up (TCP protocol) function.....	11
51. Enable network dial-up (WEBSOCKET) function.....	11
52. Disable network dial-up(WEBSOCKET) function.....	11
53. Get SOCKET dialing command .....	11
54. Get ws dial command .....	11
55. Announcement for incoming call.....	12
56. Annoucement file parameter .....	12
57. Ansewering machine.....	12
58. Play greetings for answering machine .....	12
59. Answering machine time select.....	12
60. Answering maching settings.....	12
61. POST message upload function .....	13
62. POST file upload function .....	13

63.	Setup POST message upload.....	13
64.	Setup POST file upload.....	13
65.	Setup web communication ID and Name .....	13
66.	FTP file upoad.....	13
67.	FTP Server .....	14

## **1. Initialize the device**

UsbBox\_EnableDevice()

function	UsbBox_DisableDevice
----------	----------------------

## 2. Release the device

UsbBox\_DisableDevice()

function	UsbBox_EnableDevice
----------	---------------------

## 3. Device model

UsbBox\_SetDeviceType(int nType)

nType	Device model 0 =single line 1 = 2 line 2 =4 line 3 =8 line 4 =1 line with earphone The setting will affect the return value of the number of lines
-------	--

## 4. Recording trigger

UsbBox\_SetRecordMethod(int nReference,int nMethod)

nReference	Channel Number 0-32
nMethod	Triggered by 0 =Voltage (default as analog phone) 1 = Voice (digital phone handset or audio adptor ) 2 = Polarity reversal (subscribed service)

## 5. Recording file format

UsbBox\_SetRecordFormat(int nFormat);

nFormat	Format 0 = waveform IMA-ADPCM 4KB/S 1 = MP3format
---------	---

## 6. Voice return (callback mode)

UsbBox\_VoiceCallBack(USBVOICECALLBACK pfun)

pfun	Recording realtime data Format: IMA-ADPCM Function: real time moitor
------	--

## 7. Event return (callbackmode)

UsbBox\_EventCallBack(USBEVENTCALLBACK pfun)

pfun	Event return method 1. Call back (recommended)
------	---

## 2.Message

### 8. Message reception(message mode)

UsbBox\_SetMsg(HWND hMsgWnd)

hMsgWnd	Get device event by message Get event by 2 methods 1. Callback (recommended) 2. message USBOBX_MSG
---------	--

### 9. Get line voltage

UsbBox\_GetVoltage(int nReference)

nReference	Channel0-32 Relativechannel voltage return
------------	--

### 10. Get line ringtone number

UsbBox\_GetRingCount(int nReference);

nReference	Channel0-32 Relative channel ringtone times return
------------	---

### 11. Get the current recording duration

UsbBox\_GetRecordTime(int nReference)

nReference	Channel0-32 Relative channel recording duration return (ms)
------------	--

### 12. Get Caller ID

UsbBox\_GetCallerNumber(int nReference,char \*pszCaller)

nReference	Channel 0-32
pszCaller	来电号码存储buffer 返回号码长度

### 13. Get DTMF dialing

UsbBox\_GetDtmfNumber(int nReference,char \*pszCaller)

nReference	Channel 0-32
pszCaller	DTMF按键存储buffer 返回号码长度

### 14. Clear Caller ID

UsbBox\_ClearCallerNumber(int nReference)

nReference	Channel 0-32
------------	--------------

### 15. Clear DTMF number

UsbBox\_ClearDtmfNumber(int nReference);

nReference	Channel 0-32
------------	--------------

## 16. Get the line status

UsbBox\_GetState(int nReference)

nReference	Channel Number0-32 Status:  CH_STATE_OFFLINE=0, // Line disconnected  CH_STATE_HOOKON, // Hook on  CH_STATE_HOOKOFF, // Hook off  CH_STATE_RINGON , // Ringing CH_STATE_INRECORD, // Inbound recording CH_STATE_OUTRECORD, // Outbound recording CH_STATE_SOUND, // Voice trigger CH_STATE_MUTE,  // Voice mute CH_STATE_UNAVAILABLE =255, // Channel unavailable status
------------	--

## 17. Hook off

UsbBox\_Pickup(int nReference)

nReference	Channel0-32
------------	-------------

## 18. Hook on

UsbBox\_HookOn(int nReference)

nReference	Channel0-32
------------	-------------

## 19. Enable microphone (earphone version)

UsbBox\_MicOn(int nReference)

nReference	Channel0-32
------------	-------------

## 20. Disable microphone (earphone version)

UsbBox\_MicOff(int nReference)

nReference	Channel Number0-32
------------	--------------------

## 21. Dialing

UsbBox\_Diall(int nReference,char \*pszDtmf)

nReference	Channel 0-32
pszDtmf	Telephone number
function	UsbBox_Pickup Sleep(500) UsbBox_Diall Sleep(3000) UsbBox_HookOn

## 22. Autodial(No need to call other API)

UsbBox\_AutoDial(int nReference,char \*pszDtmf)

nReference	Channel 0-32
pszDtmf	Telephone number
function	UsbBox_Diall

## 23. Start playing audio file

UsbBox\_PlayFile(int nReference,char \*pszPlayFile)

nReference	Channel 0-32
pszPlayFile	Audio file full folder (IMA-ADPCM format)
function	UsbBox_StopPlay

## 24. Stop playing audio file

UsbBox\_StopPlay(int nReference)

nReference	Channel0-32
------------	-------------

## 25. Start recording

UsbBox\_StartRecord(int nReference)

nReference	Channel 0-32
function	UsbBox_StopRecord Stop recording UsbBox_SetRecordFolder setup recording folder(auto stored)

## 26. Stop recording

UsbBox\_StopRecord(int nReference)

nReference	Channel0-32
------------	-------------

## 27. Setup the recording folder

UsbBox\_SetRecordFolder(char \*pszRecordFolder)

pszRecordFolder	Recording file folder SDKsaves the recording file to the folder and return to event after the recording completed.
-----------------	--

	EVENT_NEWRECORDFILE UsbBox_GetRecordFilePath Get auto recording files path
--	--

## 28. Get recording file path

UsbBox\_GetRecordFilePath(int nReference,char \*pszPath)

nReference	Channel 0-32
pszPath	Full path of recording file st
function	UsbBox_SetRecordFolder

## 29. Clear recording file path

UsbBox\_ClearRecordFilePath(int nReference)

nReference	Channel0-32
------------	-------------

## 30. Get the number of device connections

UsbBox\_GetDeviceCount()

Related events	EVENT_USBCONNECT
----------------	------------------

## 31. Get number of device channel

UsbBox\_GetChannelCount()

function	UsbBox_SetDeviceType (Calculated by the device type setting)
----------	---

## 32. Get device serial No.

UsbBox\_GetDeviceSerial(int nReference)

nReference	USB device serial number 0-4 connected 4 devices max.
------------	---

## 33. Get device version

UsbBox\_GetDeviceVersion(int nReference,char \*pszVersion)

nReference	USB device serial number 0-4 connected 4 devices max.
pszVersion	Device software version
function	UsbBox_GetDeviceSerial

## 34. Get SDK version

UsbBox\_GetDlVersion(char \*pszVersion);

pszVersion	Save SDK version
------------	------------------

### 35. Audio format conversion

UsbBox\_Adpcm2PCM(**char** \*pszAdpcm,**int**nLength,**short** \*pszPCM)

Covert IMA-ADPCM to PCM

pszAdpcm	Adpcm buffer
nLength	Adpcm data length
pszPCM	PCM buffer

### 36. Hook off voltage

UsbBox\_SetVoltage(int nReference,int nMinPickupVoltage,int nMaxPickupVoltage)

nReference	Channel0-32	
nMinPickupVoltage	Min. hook off volatage	3V Recommended
nMaxPickupVoltage	Max. hook off voltage	internal 20V external 30V Recommended

### 37. Line status detection

UsbBox\_SetTime(int nReference,int nPickupTime,int nHookOnTime,int nRingTime,int nOffTime,int nRelayTime)

nReference	Channel 0-32	
nPickupTime	Off hook detection	80ms recommended
nHookOnTime	On hook detection	100ms recommended
nRingTime	Ringer detection	200ms recommended
nOffTime	Power off detection	1000ms recommended
nRelayTime	Polarity reversal time	200ms recommended

### 38. Instant recording on off-hook

UsbBox\_StartRecordByPickup(int nReference,int nStartByPickup)

nReference	Channel0-32
nStartByPickup	0 = Disable 1 = Enable

### 39. Recording delay after dialing completed

UsbBox\_SetWaitRecordTime(int nReference,int nWaitTime)

nReference	Channel0-32
nWaitTime	Recording waiting time for dialing out Recommend:3s

### 40. Voice trigger recording

UsbBox\_TriggerParam(int nReference,int nSoundTime,int nMuteTime,int nVolume)

nReference	Channel0-32	
nSoundTime	Threshold acknowledge	100ms recommended
nMuteTime	Silence acknowledge	5000ms recommended
nVolume	Voice trigger volumn level, 1-32	10 recommended, the

		smaller the more sensitive
--	--	----------------------------

#### 41. PBX access code (The preliminary digits that a user must dial to get the outgoing trunk)

UsbBox\_SetOutNumber(int nReference,char \*pszNumber)

nReference	Channel0-32
pszNumber	0 or 9 is the most common access code for PBX external line The dialing out number will be time delayed after this access code

#### 42. Line playing volume

UsbBox\_SetPlayVolume(int nReference,int nVolume)

nReference	Channel0-32
nVolume	Line playing volume 0-16 0 = mute 10 = recommended

#### 43. Line recording volume

UsbBox\_SetRecordVolume(int nReference,int nVolume);

nReference	Channel0-32
nVolume	Line recording volume 0-16 0 = mute 10 = recommended

#### 44. Line AGC

UsbBox\_SetAGC(int nReference,int nAGC)

nReference	Channel0-32
nAGC	AGC 0 = Disable 1 = Enable

#### 45. Stop receiving DTMF key press time

UsbBox\_StopSaveDtmfTime(int nTimeSeconds)

nTimeSeconds	If the interval between two DTMFs exceeds N seconds after dialing, the subsequent DTMF keys will not be saved. Set=0, the entire process will be saved. Recommended 7 sec
--------------	---

#### 46. Missed Call settings

UsbBox\_MissedCallTime(int nTimeMs);

nTimeMs	If there is no answer after 2 ringing times exceeding N ms, it will be granted as missed call.
---------	--

	Recommended 7000ms.
--	---------------------

#### 47. Pickup waiting time for PC dialing

UsbBox\_SoftDialWaitTime(int nTimeSeconds)

nTimeSeconds	On PC dialing mode, waiting time before handset picking up, otherwise the call will be ended. Recommend:3s
--------------	---

#### 48. DTMF waiting time

UsbBox\_DtmfCallerIDTime(int nTimeMs)

nTimeMs	Waiting time for completed DTMFreceiving Recommend:1000ms
---------	--

#### 49. Enable network dial-up (TCP) function

UsbBox\_EnableNetDial\_TCP(int nPort)

nPort	TCP port for listening for SOCKET dial-up. Default: 4700
-------	---

#### 50. Disable network dial-up (TCPprotocol) function

UsbBox\_DisableNetDial\_TCP()

#### 51. Enable network dial-up (WEBSOCKET) function

UsbBox\_EnableNetDial\_WS(int nPort)

nPort	Websocketport for listening websocket dial-upDefault:1818
-------	--

#### 52. Disable network dial-up(WEBSOCKET) function

UsbBox\_DisableNetDial\_WS()

#### 53. Get SOCKET dialing command

UsbBox\_GetSocketDialCommand(char \*pszCommand)

pszCommand	Get dialing command string
------------	----------------------------

#### 54. Get ws dial command

UsbBox\_GetWsDialCommand(char \*pszCommand)

pszCommand	Get dialing command string
------------	----------------------------

## **55. Announcement for incoming call**

UsbBox SetAnnouncement(int nReference,int nEnable)

nReference	Channel0-32
nEnable	<p>nEnable 0=Disable 1=Enable</p> <p>The device will play the audio file on incoming calls</p>

## **56. Announcement file parameter**

**UsbBox\_SetAnnouncementFile(int nReference,char \*pszFilePath)**

nReference	Channel0-32
pszFilePath	File path, example c:\\annoucement.wav" The file format is IMA-ADPCM 32BIT

## 57. Answering machine

**UsbBox\_SetAnswerMachine(int nReference,int nEnable)**

nReference	Channel0-32
nEnable	nEnable 0 = Disable

#### **58. Play greetings for answering machine**

UsbBox\_SetAnswerMchineFile(int nReference,char \*pszFilePath)

nReference	Channel0-32
pszFilePath	File path i.e C:\\greetings.wav File format required: <b>IMA-ADPCM 32BIT</b>

### **59. Answering machine time select**

UsbBox\_AnswerMachineTimer(int nReference,int nFromHour,int nFromMin,int nToHour,int nToMin)

nReference	Channel0-32
nFromHour	Set hour for starting answering machine
nFromMin	Set minute for starting answering machine
nToHour	Set hour for ending answering machine
nToMin	Set minute for ending answering machine

## 60. Answering matching settings

**UsbBox\_AnswerMachineParam(int nReference,int nWaitRingCount,int nMaxSeconds)**

nReference	Channel0-32	
nWaitRingCount	Ringer count before active answering machine	Recommended: 3 times

nMaxSeconds	Max answering maching time (sec) Recommend: 60s	
-------------	---	--

## 61. POST message upload function

Enable/Disable POST message upload function to URL

UsbBox\_SetPostMessage(int nEnable)

nEnable	nEnable 0 = Disable 1 = Enable
---------	--------------------------------

## 62. POST file upload function

UsbBox\_SetPostFile(int nEnable)

Enable / Disable POST file upload function to URL

nEnable	nEnable 0= Disable1 = Enable
---------	------------------------------

## 63. Setup POST message upload

Setup POST message upload URL

UsbBox\_SetPostMessageURL(char \*pszMessageURL)

pszMessageURL	Message upload URL i.e <a href="http://192.168.1.100:80/api/Event?">http://192.168.1.100:80/api/Event?</a>
---------------	---

## 64. Setup POST file upload

Setup POST file upload URL

UsbBox\_SetPostFileURL(char \*pszMessageURL)

pszMessageURL	File upload URL i.e <a href="http://192.168.1.100:80/api/Files">http://192.168.1.100:80/api/Files</a>
---------------	--

## 65. Setup web communication ID and Name

Set system name system ID for POST upload

UsbBox\_SetSystemInfo(char \*pszSysName,char \*pszSysID)

pszSysName	System name utf8<32 characters
PszSysID	<a href="#">System ID</a> Must be an 8-digit number. The unique identifier for communicating with the web page.

## 66. FTPfile upload

Enable /Disable file uploading to FTP

UsbBox\_SetFTP([int](#)nEnable)

nEnable	Option for file uploading to FTP nEnable 0 = disable 1 = enable
---------	---

## 67. FTP Server

UsbBox\_SetFTPPParam(**char**\*pszHost,**char**\*pszUserName,**char**\*pszPassword,**int**nPort)

Settings

pszHost	FTP server IP
pszUserName	FTPUser name
pszPassword	FTPPassword
nPort	FTPport defualt: 21
